

## Statistic Suite

Test Rig comprehensive  
Data Merging & Evaluation

### Statistic Suite

The inotech test software contains beside the modules for the process control and the measurement data logging as standard equipment a data base. In order to merge the data bases of several test rigs in a central database inotech offers the Statistic Suite Connector-Software. This software offers the opportunity to administer the data of inotech test rigs and other test rigs in a central data base.

The evaluation and the export of the centralized data can be executed with the inotech Statistic Suite Software.

The following functions are available as standard:

- Visualization of the calibration data with an individual configurable search and filter function
- Visualization of the test rig data with the state variables and the hours of operation

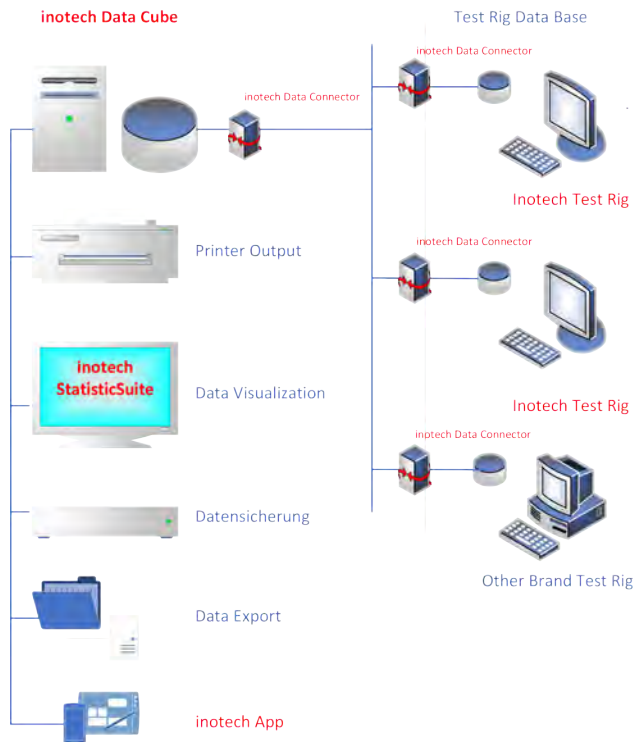

- Visualization of the productivity data with quantities and error rates of the calibrated meters over freely selectable time periods
- Analysis of the test rig availability with the information about failures with causes and time stamps
- Individual configurable printer output of all evaluations
- Graphical presentation of the measuring data in form of bar and pie charts
- Data export of the raw data and the evaluations
- Central data backup on individual selectable drives

The screenshot displays a data table within the inotech Statistic Suite software. The table has multiple columns and rows, containing numerical and text data. The interface includes a navigation pane at the top and a status bar at the bottom.

### Installation Statistic Suite

The installation of the inotech Data Cube Software can be done at new test rigs or as well at existing test rigs. The integration of additional test rigs is possible at any time.

- Low pressure test rigs for domestic and industrial gas meters
- High pressure test rigs for gas meters designed as closed-loop or as bypass
- Mobile gas meter test rigs
- Modernization of test rigs
- Test rigs for gas pressure regulators
- Test rigs for water meters and heat meters
- Purging units
- Leakage test units

- Remote support and service support
- Spare parts
- Maintenance contracts
- Preventive maintenance
- Update service
- System availability service
- System extension
- Software support with customized adaptations
- Standard and tailor-made trainings
