PRODUCT RANGE

- Low pressure test rigs for domestic and industrial gas meters
- Closed-loop test systems for thermal gas meters
- Manufacturer test systems for metering stations
- High pressure test rigs for gas meters designed as closed-loop or as bypass
- Testing rigs for domestic and large water meters testing rigs
- Testing rigs for heat meters
- Testing rigs for electricity meters
- Mobile gas and water and electricity meter testing rigs
- Testing equipment for gas pressure regulators
- Flushing equipment
- Leakage testing equipment
- Testing equipment modernization
- Measurement data evaluation systems (InoCloud)

SERVICE PROGRAM

- Calibration services according to DIN EN ISO/IEC 17025:2018
- Remote support and on-site service
- Maintenance contracts
- Preventive maintenance
- Update service
- Spare parts deliveries
- System expansion
- Software support with customized adaptations
- Customer related trainings

PROGRAM SEQUENCE

START OF THE SAMPLING INSPECTION

Determination of the Meter Lot Parameter Description for the Sampling Inspection

- 3. Selection of the Meters for the Sampling Inspection
- 4. Selection of the Test Procedure
- 5. Sampling Inspection
- 6. If required: Test of Replacement Meters
- 7. Documentation of the Test Results
- 8. Storing the Data (Test Results)

END OF SAMPLING INSPECTION

DESCRIPTION

The latest generation of the inotech test software includes the module sampling inspection. This supports the inspection body at the performance of the sampling inspection, what leads to an extension of the life cycle of domestic gas meters in the gas network.

At a glance:

• Low efforts to achieve the prolongation of the calibration interval (instead of an exchange in a regular cycle only the meters for the sampling inspection are to be removed)

- The sampling inspection works according the german "administrative regulations legal metrology/process instructions for sampling procedures to prolonge the calibration validity / GM-VA SPV / 20.03.2018"
- Supports the inspection body at the notification procedure by describing the meter lot and by the documentation of the data of the sampling inspection
- The result of the sampling inspection is recorded for the transfer to the calibration authority and stored to the data base
